

Drug detection list

Drug	Class	Description
Antidepressants		Used to treat depression and anxiety. A hair drug test for the antidepressants drug group includes fluoxetine (Prozac), trazadone and clozapine.
Anti-Epileptics (incl. Pregablin and Gabapentin)		Available in capsule, tablet or liquid form. Both drugs are used to treat seizures and nerve pain. Pregablin can also be used to treat anxiety.
Benzodiazepines	C	Prescribed to reduce anxiety, our hair strand test is able to detect desmethyldiazepam, diazepam (Valium), oxazepam, temazepam, nitrazepam and flunitrazepam (Rohypnol).
Buprenorphine	B	Buprenorphine (Subutex) is used in the treatment of heroin addiction. A synthetic opiate, it is commonly prescribed in a tablet form, however, can be crushed to be injected or inhaled.
Cannabis	B	A naturally occurring drug made from parts of the cannabis plant.
Cathinone	C	Cathinone (Khat), the active ingredient of the Khat plant, is a stimulant with similar effects to amphetamine. Long term use may cause insomnia, anorexia, anxiety, depression and paranoia.
Cocaine (incl. Crack Cocaine)	A	Obtained from the leaves of the coca plant, cocaine is a stimulant drug of the central nervous system. High doses can cause respiratory or heart failure. Our hair test for cocaine will also look for Benzoylecgonine, AEME and Cocaethylene.
Ecstasy (MDMA)	A	Ecstasy is a white crystalline powder known to chemists as MDMA; most commonly sold in a tablet form. Side effects can include paranoia and psychotic states. Our hair strand test looks for MDMA as well as its metabolite MDA, which is used to show direct usage.

Drug	Class	Description
Fentanyl	A	Fentanyl is a synthetic opioid which mimics the body's natural painkillers, blocking pain messages to the brain. A psychoactive drug, covered by the 2016 Psychoactive Substances Act, means it's illegal to give away or sell.
Ketamine	B	Ketamine is a strong anaesthetic drug used during operations on humans and animals. If high enough doses are taken, the aesthetic properties of Ketamine can come into effect causing unconsciousness or even death.
LSD	A	A hallucinogenic drug derived from the fungus ergot, LSD is often in a liquid form that is dropped onto paper sheets or sugar cubes. The effects are dose dependent, can last up to 12 hours and the user will not know how strong it is until it is taken.
Mephedrone (M-Cat)	B	Mephedrone (4-methylmethcathinone) is derived from cathinone (the same chemical found in the plant Khat). It can cause anxiety, paranoia and risk of over stimulating the heart.
Methadone	A	A synthetic opiate used medically in the treatment of heroin dependence. Our hair drug test for methadone also includes its metabolite EDDP.
Methamphetamine (incl. Amphetamine)	B	Methamphetamine (crystal meth) is a stimulant of the central nervous system with a high potential for misuse and dependence. It is a synthetic drug, chemically similar to amphetamine (speed). Amphetamine is a stimulant drug that increases alertness, concentration and the energy of the user.
Opiates (incl. Heroin)	A	Opiates are a group of drugs that contain constituents derived from the opium poppy plant. A hair test for the opiates drug group will look for 6-MAM (a heroin specific metabolite used to show heroin use), morphine, codeine and dihydrocodeine (found in over the counter pain relief remedies).
Pethidine	A	Pethidine is a synthetic substance, which is more sedative, has a more rapid onset and a shorter duration of action than morphine.
Psychoactive substances ('legal highs')	Various	Taken for their euphoric effects, these drugs are often sold as 'research chemicals', 'bath salts' or 'not for human consumption'. Controlled under the Psychoactive Substances Act, we can detect 38 different compounds that may be present in Psychoactive Substances.
Steroids	C	Steroids are drugs that mimic certain natural hormones in the body that regulate and control how the body works and develops. There are two main groups of natural steroids – anabolic steroids and corticosteroids. Anabolic steroids are available as tablets or as a liquid for injection.

Drug	Class	Description
Spice (synthetic cannabinoids)	Various	Spice is a group of synthetic cannabis compounds which mimic the effects of cannabis. These compounds do not produce positive results for drugs and metabolites within the Lextox cannabis drug group. We currently test for nine spice compounds.
Tramadol	C	Tramadol is a prescribed synthetic drug that is used in the treatment of moderate to severe pain relief.
Zolpidem (hypnotics)	C	Used to promote sleep and aid in the treatment of insomnia. The drug group includes zolpidem. They are not a benzodiazepine, however, act on the same areas of the brain.
